## Random Pub App

### Blue Igloo IT announce the release of the Random Pub App, available now in the Windows Phone Store

Find a nearby place for dinner or drinks in a fun random way.

This app is a fun way to find a randomly selected venue for dinner or a drink in your local area. All you need to do is indicate how far from your current location you are willing to travel and what type of venue you are looking for.

The app will download a selection of venues based on your preferences and then select one at random. Since we know not every random suggestion will be a winner, you have the option of tossing the suggestion in the bin and displaying another random venue. Once you find something that looks good you can then display a map showing you the venue's location. Our aim is to provide a fun way of finding new places in your area. You never know, you might just uncover a hidden gem.

Features:

- Location services provided by Google.
- Map showing location of selected venue.
- Ability to save default settings for travel distance and venue type.
